EDUCATION

EMSI — Génie informatique et réseaux
Engineering Degree | 2023–2028

CERTIFICATIONS

- [JS, jQuery & JSON — EMSI \(Jan 2026\)](#)
- [Intro to OOP C++ — EPFL \(Dec 2025\)](#)

TECHNICAL SKILLS

Languages

Python · PHP · SQL · HTML/CSS/JavaScript

Frameworks

Django · Vue.js · Laravel · REST API

Databases

MySQL · MongoDB · SQLite

Tools

Git · GitHub · UML

LANGUAGES

- Arabic (native)
- English (C1)
- French (B1)

ABOUT ME

Third-year computer engineering student at EMSI Casablanca. Most of what I know I learned by building things—a hotel management system, an e-commerce platform, an e-learning site — not because they were assigned, but because seeing an idea become a working application is what got me into this field. Full-stack web development is where I am now, and AI is what I am watching closely. Seeking a first internship where the work is real and the people take their craft seriously.

PROJECTS

- HOTEL MANAGEMENT APPLICATION** **2025–2026**
Vue.js · Django · SQLite
Full backend with REST API, reservations logic, and room availability. Role-based access system (Admin, Receptionist, Client). Architecture modeled with UML; Vue.js frontend connected via API.
- MINI E-LEARNING PLATFORM** **2025–2026**
Vue.js · Laravel · MySQL · Redis
Redis is for session management to eliminate unnecessary page reloads and make navigation significantly smoother.
- FULL-STACK E-COMMERCE PLATFORM** **2024–2025**
JavaScript · Django · MongoDB
MongoDB database handling both the product catalog and order management. CSRF protection built in from day one; query optimization for performance on high-traffic pages.
- INVENTORY MANAGEMENT SYSTEM (CLI)** **2024–2025**
C · Doubly Linked Lists
Command-line application in pure C to manage products, suppliers, and purchase orders using doubly linked lists — no external libraries.
